BIO-HYDRATE					0.15g/L			0.15g/L							

Instructions

- Liquid dosage 1g ≤ 1ml
- To maintain a healthy environment in your media always use dechlorinated water. To dechlorinate water let chlorinated water sit for 24h in an open container.
- Do not foliar spray in direct sun. Wait for more shady weather or use early in the morning before first sunlight or in the evening after sunset.
- If possible, use minimal salinity water for foliar spraying. The best option for foliar sprays is rainwater, since tap water usually contains some salts.
